CERAMIC CAPS

GRIND LONGER ON THE HARDEST METALS: CERAMIC ABRASIVE CAPS WITH SELF-SHARPENING EFFECT

With the ceramic abrasive cap from LUKAS-ERZETT, a tool for straight grinders is now available that makes machining smaller parts and deburring extremely easy. Thanks to the self-sharpening effect, an extra-long tool life is an added bonus.

Maximum cutting performance: The abrasive caps with ceramic grains were developed for machining the most demanding materials.

Their aggressive grinding characteristics are retained for a very long time thanks to the self-sharpening capability.

4 DIFFERENT SHAPES AVAILABLE

ALL-AROUND TOOL
FOR DEBURRING, GRINDING,
BEVELLING AND REGRINDING

**GRIT 60 ALSO
ON REQUEST**

Product number	Description	Grit size	H mm	T mm	Pack contains
